
How to Turn 300 Pages of Data into a 30-page Report

Kate van Gelder

Pacific Northwest Intergovernmental Audit Forum, Olympia
September 5, 2013

The Goal

Today's Talk

- Understand your readers
- Summarize your data
- Simplify your message
- Write concisely

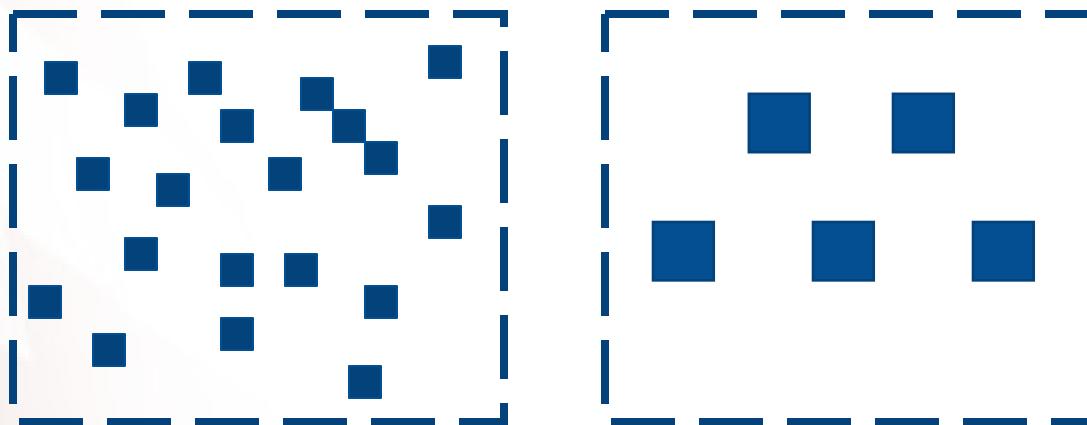

Accommodate Your Readers

- Understand distractions
- Chunk information
- Provide context
- Inform and educate

Understand Distractions

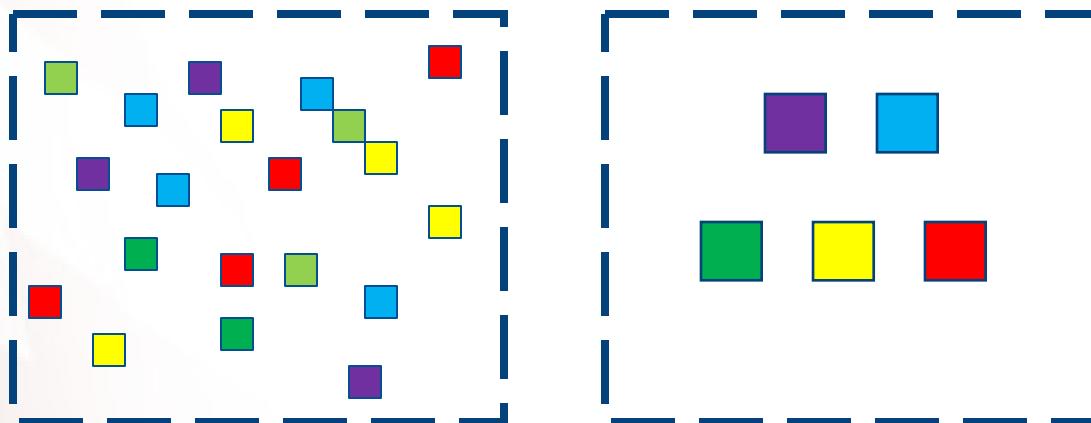

- Information overload
- Short attention span
- New media
 - E-mail
 - Facebook
 - Twitter

Chunk Information

but limit the
number of
chunks

Chunk Information

but limit the
number of
chunks

Provide Context

What might the reader be familiar with that you can link new information to, so that it makes sense?

- Time
- Place
- Program
- Event

Inform and Educate

- Inform

Most of VA's elderly outreach is web-based.

- Educate

Most of VA's elderly outreach is web-based, but two-thirds of older adults don't use the Internet.

Summarize Your Data

- Interpret for your reader
- Show rather than tell

Interpret For Your Reader

- Was there an increase / decrease?
- Is the trend upward / downward?
- Are most / few states implementing the policy?
- Did funds increase while participants decreased?
- Is participation greater for Whites than Hispanics?
- Are women more at risk than men?

Show Rather Than Tell

To encourage providers to establish and maintain private patient plans for their clients, the federal government provides a tax deduction for the cost of these plans. The IRS Code also permits certain organizations to receive tax-exempt status if they meet the requirements of the Uniform Model Private Patient Plan (UMPPP). Qualifying organizations include foundations, hospitals, and other nonprofit entities that are tax-exempt under section 501(c)(3) and meeting the requirements of the IRS are tax-exempt under section 501(c)(3).

And, because a supplemental patient plan is a plan that is not an official preferred plan, the insurance company may require a supplemental patient plan to have a higher deductible than the original plan. Additionally, supplemental patient plans may incur a higher level of copayments and coinsurance than the original plan.

Because private plans do not pay money to patients in the form of benefits, health insurance companies do not pay money to patients in the form of benefits. Instead, the insurance company pays the provider directly. The insurance company uses value calculations to determine the amount of payment to the provider and the amount of payment to the patient. The value calculation is based on the patient's age, gender, and other factors such as the patient's medical history and current health status. The insurance company also takes into account the cost of treatment and the cost of insurance premiums. The insurance company may also consider the patient's income and assets when determining the amount of payment to the patient.

Before the enactment of the Medicare Retiree Reinsurance Act of 2003 (MERRA), the insurance company would not pay money to patients in the form of benefits. Instead, the insurance company would make a contribution to the patient's plan to help cover the cost of treatment. The MERRA law changed this by requiring the insurance company to pay money to patients in the form of benefits. This change was made to encourage providers to offer private patient plans to their clients.

One of the most interesting provisions in MERRA is the reinsurance provision. This was designed to ensure that the insurance company would not pay money to patients in the form of benefits. Instead, the insurance company would contribute to the patient's plan to help cover the cost of treatment. This change was made to encourage providers to offer private patient plans to their clients.

Another example of a provision in MERRA that has not been fully implemented is the provision that allows plans to receive money from their plan members to help cover the cost of treatment. This change was made to encourage providers to offer private patient plans to their clients.

DOD has a continuing obligation to negotiate affordable rates for a variety of construction-related services. DOD contractors receive, digest, analyze, and evaluate information and plan and report local needs annually. The DOD contractor is responsible for identifying and reporting all types of services of need that require DOD facilities or resources to support them (e.g., planning, engineering, design, construction, maintenance, repair, and inspection services; training, equipment, supplies, and fuel); and to brief senior officials on these needs.

DOD's current funding policy does not require contractors for contributions made to the construction of their facilities to be compensated by the DOD. ERAs are required to make contributions to the local military facility policy to support the DOD. ERAs are also required to contribute to the construction of their facilities. Contributions made to the local military facility policy include cash and in-kind contributions, such as, personnel, government funds, and costs, space, capital, international investments, and insurance contracts.

Defined Benefit (DB)

What is it?	A monthly payment during retirement based on the employee's salary and tenure	A pool of cash, enhanced by financial investment, that can be drawn upon during retirement [i.e. 401(k)]
Who finances the plan?	Employer, who bears all costs	Worker, often with a limited employer match
Who manages the plan?	Employer, who selects provider and may select investments	Employer selects provider, but most plans allow worker to select investments
How do the contribution costs compare?	Costs born entirely by employer Costs can fluctuate, but are generally smoothed by amortization	Costs shared by worker and employer Less fluctuation in costs, but payments must be pre-funded or made immediately
Advantages for workers	Dependable lifetime income Benefit grows with length of service	Portable Investment gains can increase available cash
Disadvantages for workers	Not portable Workers who change jobs earn a smaller benefit	Investment losses can decrease available cash No reward for length of service
Advantages for employers	Can serve as a worker retention tool	Workers bear all risk of investments
Disadvantages for employers	Employer solely responsible for funding monthly payments and bears all risk of investments	Portable, so less valuable as a retention tool Higher administrative costs

Why Graphics Are Effective?

- **For writers, a graphic**
 - organizes the information
 - helps with analysis

- **For readers, a graphic**
 - supports and supplements analysis of the information
 - translates complex data to a visual to aid understanding
 - makes the presentation of the message more understandable, accessible, and memorable

Two Types of Graphics

Table

A comparison—in columns and rows—of information or categories of information

Examples: Amounts of money or details of programs

Figure

A pictorial or diagrammatic representation of information

Examples: Bar charts, pie charts, line charts, time lines, maps, photographs, organizational charts, and flow charts

Streamline Text with a Table

SNR 2000 vs DR 2000

There have been a great number of SNR phase over the past 10 years, and, as a result, many studies have been published on the effects of SNR phase on performance. In this study, we compared the performance of 2000 participants in SNR phase and DR phase. The results show that the average error rate was 21.4% in SNR phase and 21.6% in DR phase. Furthermore, 21.4% in SNR phase was significantly higher than 21.6% in DR phase ($p < 0.05$). This indicates that the performance of SNR phase was worse than that of DR phase.

In addition, the results showed that the number of defined errors per hour was lower over the last 10 years. The average number of defined errors per hour in 2000 was 1.4, while the average number of defined errors per hour in 2000 was 1.6. This indicates that there is a significant improvement in the number of defined errors per hour in recent years.

A DR phase has been shown to reduce the chance of errors—such as phase errors and time errors—but it has also been shown that all active participants make errors during phase periods, particularly those who are less experienced. Thus, the results of this study indicate that the number of errors in the phase period has decreased over the last 10 years. This is a significant improvement in the number of errors in the phase period, which may be due to the fact that more people are now using DR phases or that they are more experienced in using DR phases.

It is interesting to note that the number of errors in the phase period has decreased over the last 10 years. This is a significant improvement in the number of errors in the phase period, which may be due to the fact that more people are now using DR phases or that they are more experienced in using DR phases.

Regulation and oversight of phase plan

The National Capital Planning Commission (*Phase Plan in Millions of Dollars and Phase Plan Description*, 2000) has issued a new regulation that requires all new developments to include a phase plan. This regulation is intended to ensure that all new developments are built in a safe and sustainable manner. It also aims to encourage developers to build in a way that is consistent with the principles of sustainable development. The regulation requires that all new developments must include a phase plan, which must be submitted to the National Capital Planning Commission for review. The commission will then review the phase plan and provide feedback to the developer. If the phase plan is approved, the developer can proceed with the construction of the development. If the phase plan is not approved, the developer will be required to make changes to the phase plan until it is approved.

The regulation also requires that all new developments must include a phase plan, which must be submitted to the National Capital Planning Commission for review. The commission will then review the phase plan and provide feedback to the developer. If the phase plan is approved, the developer can proceed with the construction of the development. If the phase plan is not approved, the developer will be required to make changes to the phase plan until it is approved.

negotiations in the past. PAG previously worked on such ventures in the United States, and the company has been involved in similar negotiations in the United Kingdom.

Another funding deal for both coal-industry and shale-gas players? In general, the coal-industry funding deal will affect all energy companies in the UK, as the UK energy market is highly integrated. The new funding deal will be linked to fueling up to 100 percent of the UK's power generation by 2015. According to the deal, the government will provide financial support to oil and gas companies that are "strategically important" to the UK economy. This means that, on their obligation to supply oil and gas to the UK, oil and gas companies will be allowed to defer some of their tax liability to the government. The new funding deal will be subject to a review in the middle of 2013. The government will then decide whether to renew the deal or whether to phase it out. It is not clear exactly what will be in store once the deal is renewed, but the government will have to take into account the impact of the deal on oil and gas companies' balance sheets (op. cit. para 5).

D&E Contractor Preferences

DOJ has a continuing obligation to minimize allocable costs for a variety of economic sponsored programs. DOJ contractor preferences are designed to reduce costs and improve program quality. These preferences consist of three types of contracts: fixed price, time and rate, and time and materials. The time and rate contract may be used for short-term projects. In this manner, per hour rates of service will be determined, the employee or contractor charge only the hours worked. The time and materials contract may be used for longer term projects. A firm retains employees only, and may assign them to one or more permanent employees.

DOJ's current funding policy is to award contracts for construction from funds made available in the specified DOJ plans for construction contractors as authorized by the ESEA. Thus procurement procedures are dependent upon the DOJ's funding decision. For example, the funding may be provided by the DOJ, ESEA, or other sources.

A plan which emphasizes projects that a school district can afford to construct on its own, and which does not necessarily mean that a plan must be related to a specific funding source, is the D&E. This plan has 17 plus which clearly link on-plan implementation to revenue, and total financial costs are roughly equal with requirements of

Defined Benefit (DB)

What is it?	A monthly payment during retirement based on the employee's salary and tenure	A pool of cash, enhanced by financial investment, that can be drawn upon during retirement [i.e. 401(k)]
Who finances the plan?	Employer, who bears all costs	Worker, often with a limited employer match

The Corrosion Office Used a Rigorous Multistep Process to Select Projects for Funding

For the fiscal year 2011 project review and selection, we observed that the Corrosion Office used a rigorous multistep process to determine if proposed projects were acceptable for funding.

- Step 1:** In mid-June 2010, the military departments submitted 81 CPC project proposals to the Corrosion Office, as shown in table 1 above. At this point, Corrosion Office support staff assembled the project plans into binders for review by the project selection panel convened by the Director of the Corrosion Office. The fiscal year 2011 panel had five members: the Director, Corrosion Office (chair); Associate Director, Materials and Structures, Office of the Director, Defense Research & Engineering (vice-chair); and an official from each of the following organizations within the Office of the Under Secretary of Defense (Acquisition, Technology and Logistics): Defense Acquisition University; Installations and Environment; and Logistics and Materiel Readiness, Maintenance Policy and Programs.¹⁸
- Step 2:** In mid-July 2010, 2 weeks after project information was provided to the panel, the panel members assembled for their preliminary evaluation of the proposals. This preliminary evaluation, which we observed, was conducted at a meeting immediately prior to the annual DOD Corrosion Forum and resulted in projects being designated as either a "go" (meaning that the projects are deemed acceptable in their current form) or a "no go" (meaning that the projects require additional information or changes in scope to be acceptable to the panel). We observed that the panel used criteria for this preliminary evaluation that are not made available to the submitters of project proposals and are different from those used for final project selection later in the process.¹⁹
- Step 3:** Following the preliminary evaluation and during the Corrosion Forum, the panel held individual feedback sessions with project managers from the military commands, such as Naval Air Systems Command, Army Aviation and Missile Command, and Air Force Civil Engineer Support Agency, so feedback could be done in person. The

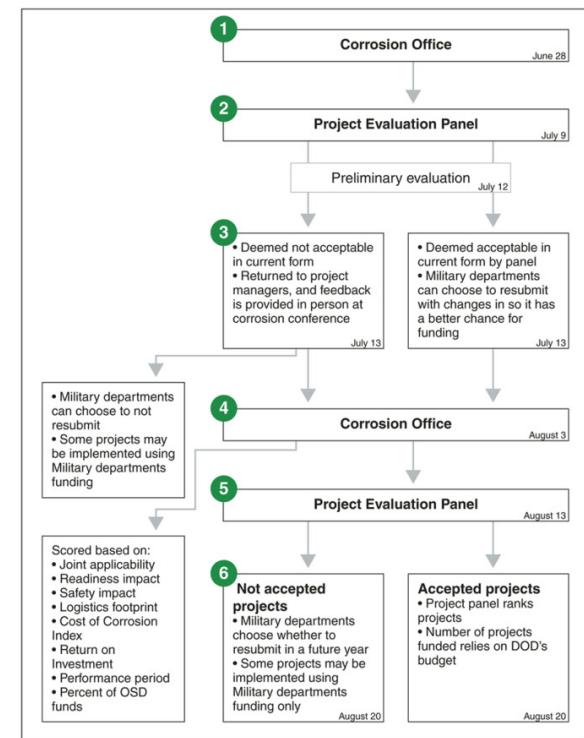

panel provided feedback on each project, regardless of whether it was designated as a "go" or "no go." A panel member told us that the panel provided feedback on all projects so that project managers could address—if they choose to do so—any perceived weaknesses in their "go" projects and improve their ranking in the final evaluation, as well as revise the "no go" project submissions. Following the feedback, the project managers had three options: prepare and submit information addressing the feedback provided by the panel, re-submit project proposals in their original form, or remove projects from consideration for that year's funding process. Project managers told us that they sometimes decide to remove their "no-go" projects from consideration and that the military departments may implement such projects using other funding. A project selection panel member told us that if a project manager decided to modify a project proposal to address the panel's feedback, this modified proposal was due to the Corrosion Office no later than 2 weeks after the feedback session. Upon receipt of any revised proposals, the panel conducted another review of all proposals (original and resubmitted), which involved each panel member independently scoring the projects on judgmental criteria and providing written comments.²⁰

- Step 4:** In mid-August 2010, Corrosion Office support staff used an analytical tool to rank the projects based on the average of the scores recorded by each panel member for eight criteria: the five judgmental criteria above and three quantitative criteria—ROI, Corrosion Office funding as a percentage of total project cost, and the project performance, or implementation, period.
- Step 5:** Following the ranking of projects using the analytical tool, the selection panel reconvened for a final evaluation of the projects. The panel arranged the ranked list that resulted from the analytical tool described above into four categories: best, acceptable-prioritized for funding, acceptable—not prioritized, and not acceptable. According to the staff, the "best" projects would likely all be funded, the "acceptable-prioritized for funding" projects would be funded by priority until the Corrosion Office funding is exhausted. Corrosion Office support staff informed the panel that, based on historical funding levels, they anticipated having \$7 million in available funding

¹⁸The panel member from Logistics and Materiel Readiness, Maintenance Policy and Programs did not participate in the project selection meetings we observed.

¹⁹The criteria used for the preliminary evaluation include whether the proposed project requires greater than \$500,000 of Corrosion Office funds to complete, uses similar technology to a previously approved project, or is anticipated to take more than 2 years to complete. The preliminary evaluation did not consider the joint applicability of the project, but this was a criterion in the final project evaluation.

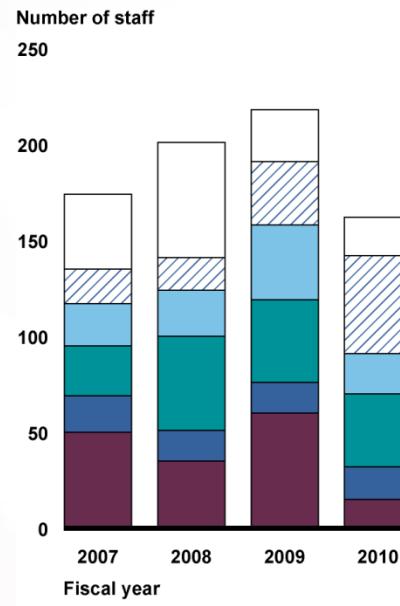

²⁰The judgmental criteria are: joint applicability, readiness impact, safety impact, logistics benefits, and anticipated contribution of the project to reducing the cost of corrosion. Corrosion Office officials told us that they believe the criteria to be clearly identified in the DOD *Corrosion Prevention and Mitigation Strategic Plan*.

Analysis, Deduction, and Prediction: Combination

Four hurricanes made landfall in the United States within a 6-week period in 2004. The storms caused an estimated \$27 billion in insured losses in the United States and the Caribbean. As a whole, the 2004 hurricane season is the second most expensive insurance event in U.S. history, behind the September 11, 2001, terrorist attacks. The chart below details the impact of the four storms on Florida.

	Date of landfall	Saffir-Simpson Hurricane Scale	Estimated insured losses (in billions)	Number of claims reported (in thousands)
Charley	13 Aug. Sept.	1 2 3 4 5	\$7.885	449
Frances	5 Aug. Sept.	1 2 3 4 5	4.801	504
Ivan	16 Aug. Sept.	1 2 3 4 5	3.914	197
Jeanne	25 Aug. Sept.	1 2 3 4 5	4.153	393

Identifying Graphic Opportunities

1. Scan for key words (for example: “data,” “location,” “how,” “process,” “why,” “what,” and “frequency.”)
2. Jot down initial ideas for graphics (for example: what type of graphic or combination of graphics, such as a map with a bar chart).
3. Think about next steps or questions (for example, requesting information or sources from an agency, finding existing models or samples, and defining the range of values or the time period that needs to be covered).

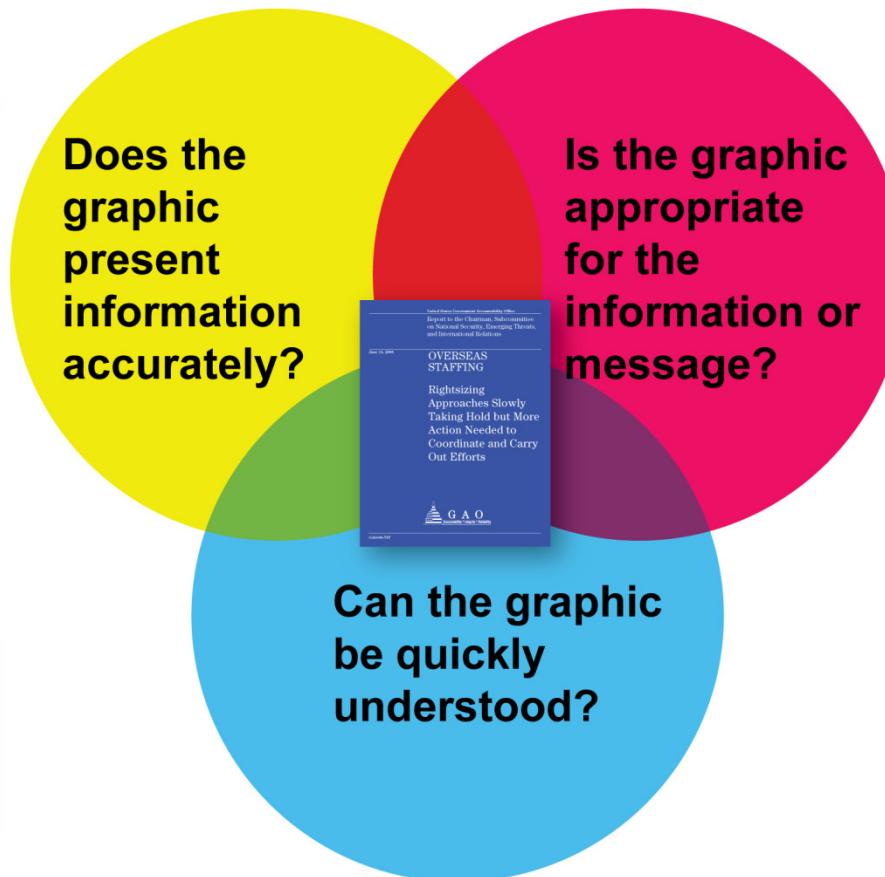

FOCUS HERE:
(first two columns of design matrix)

Researchable Question(s)	Information Required and Source(s)
<p>1. What is known about the nature and prevalence of mortgage foreclosure rescue and loan modification schemes?</p> <p>a. What are the federal laws prohibiting these schemes?</p> <p>b. What is known about the nature of these schemes?</p> <p>c. What data exist, if any, on the incidence and geographic location of these schemes?</p>	<p>1a. Key federal laws and regulations on prohibited practices, such as</p> <ul style="list-style-type: none"> • FTC Act provisions concerning unfair and deceptive practices and prohibitions on charging fees in advance for related services. <p>(Sources: Statutes and regulations identified by key federal agencies and “selected” states.)</p> <p>1b. Descriptions of typical foreclosure rescue and loan modification scams:</p> <ul style="list-style-type: none"> • how they work • perpetrators • potential victims <p>(Sources: Enforcement cases—filed by the FTC, DOJ, and selected U.S. Attorneys and State AGs; Subject matter experts at federal agencies—FTC, HUD, DOJ, Treasury-FinCEN, selected U.S. Attorneys and State AGs, and national non-profits, including HPF and NW, Lawyer’s Committee, as well as reports, letters, and testimonies that all of the above may have published.)</p> <p>1c1. Identify available data, such as:</p> <ul style="list-style-type: none"> • complaint data (Source: FTC’s Consumer Sentinel, selected state agencies, and national nonprofits—HPF & Lawyer’s Committee). • enforcement data (Source: DOJ, FTC, and U.S. Attorneys & State AGs from selected states). • investigative data (Source: Federal investigative data—at FinCEN, FBI, and SIGTARP) <p>1c2. Expert opinion on what the data may say about prevalence. (Source: Data providers identified in 1c2.) descriptions in 1c2)</p> <p>1c3. Criteria for assessing if available data are reliable.</p>

Example

1. **Key words:**
“geographic location”
2. **Initial ideas:**
A list, table, or map
3. **Next steps or questions:**
If we do a map, are Federal Trade Commission data at state or county level? Does FTC have data? Are the data current? Can we show multiple types of data (complaints, enforcements, investigations)—is any one type more important than the others? Can we show “incidence and geographic location” together?

- Write strong topic sentences

Plain Language

Instead of

Purchase.....Buy

Reside.....Live

Endeavor.....Try

Use

www.plainlanguage.gov

Eliminate Wordiness

Before

In order to ensure that we can draw a conclusion about the extent to which the lack of data point to problems in overseeing the effectiveness of the program, we should endeavor to assess the sufficiency of the database, notwithstanding the fact that the agency has in the not too distant past issued assurances of its quality. (57 words)

After

To adequately determine whether program oversight is possible with existing data, we should assess the database quality. (17 words)

Eliminate Redundancy

Before

Child Protective Services agencies collect information about children who are **maltreated** and the circumstances surrounding **maltreatment**—including children who died from it—to aid efforts to prevent **maltreatment**. (28 words)

After

Child Protective Services collect information about children who are harmed by and die from **maltreatment**. This information, such as the circumstances surrounding **maltreatment**, is used for prevention efforts. (28 words)

Eliminate Acronyms

Before

Training for VSRs, RVSRs, and DROs in the VBA has been a recurring problem according to VA's OIG.

After

Providing adequate training to veterans service representatives—including those who rate claims—and decision review officers, has been a recurring problem according to VA's inspector general.

Write Strong Topic Sentences

Weak

The cost estimates for the four projects lacked credibility.

Strong

The cost estimates for the four projects we reviewed did not exemplify the four characteristics of high-quality cost estimates as established by best practices—credible, well-documented, accurate, and comprehensive.
