

Taka's top 5 advice on data science

Focus on exploratory techniques

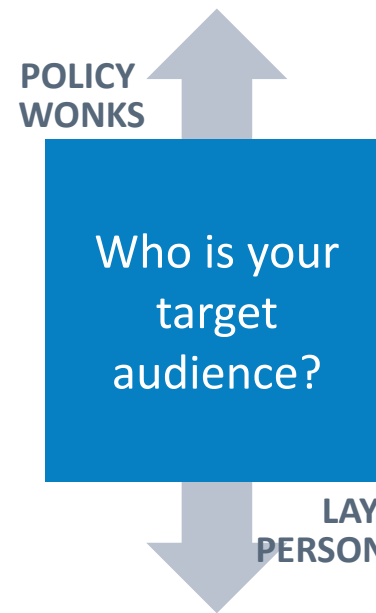

Focus on defined, linear methods to prove/disprove hypotheses
(hint: effectiveness, efficiency, economical, ethical, equitable)

Prove that data is complete, reliable, and accurate

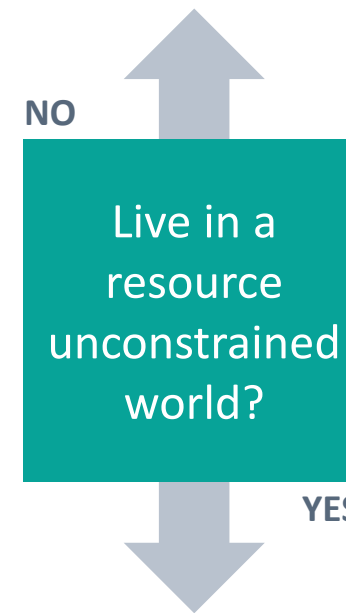

Make metadata available and accessible

Implement an API and let them have the fun!

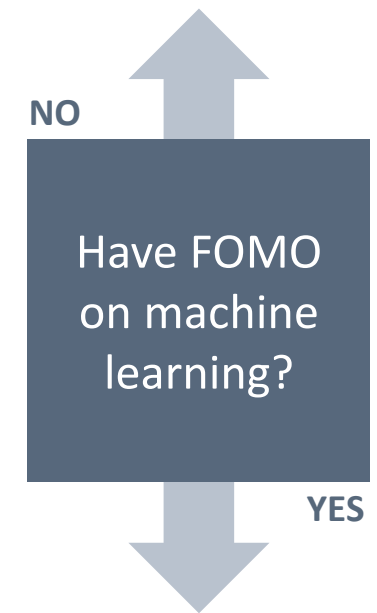

Do not give them bar charts or line graphs!

Let open-source (free) be your best friend!

Buy a quantum computer and hire FANG data scientists

You know deep learning is not an answer to your prayers

Start with low-risk use cases using in-house NLP
